Hallo,

as briefly described during meeting in Brunswick the latest version of rollingstock scheme is 0.93 with the major addition of train related data in <formation> branch. However, it is still possible to discuss the best "mounting point" of this branch:

1. railml --- rollingstock --- rs      <= vehicle related

|

-- formations --- formation <= train related

\*or\*

2. railml --- rollingstock --- rs      <= vehicle related

|

-- formation <= train related

Please give me your opinions.

Best,

Joerg von Lingen
