Dear railML users,

with the ticket #251 (cf. [1]) we re-opened the topic of modelling transition bends, which was already "discussed" here in the forum some years ago (cp. [2]).

Within railML 3 we want to define a solid solution for this problem since transition bends cannot be modelled with the existing infrastructure schema 2.2.

Therefore: If you have any comments on the usage of transitions bends in your applications and data models, feel free to post them here in order not to forget about them and add them to the ticket.
