Subject: Line category according to EN 15528
Posted by Christian Rahmig on Mon, 01 Jun 2015 09:38:25 GMT

Dear railML community,

with railML 2.3 we also want to implement line categories as defined in
EN 15528. Therefore we set up the Trac ticket [1] including the following:

The European standard EN 15528 defines line categories depending on the
maximum allowed meter load and axle load. The following entries are
possible:
* A
* B1
* B2
* C2
* C3
* C4
* D2
* D3
* D4
* D4xL
* E4
* E5

Any comments on this approach, which has been initially implemented with
revision 621 (see [2]), are welcome.
