Dear All,

Would you mind answering the following questions for me

1. Category
 Regarding to the wiki, category means

terms are defined quite differently.'
(httpwiki.railml.orgindex.phptitle=TTcategory).

But in TT_S-Bahn_ZH.xml, the category instance has only following data;

categories
    category id=d2e125
categories

2. Rostering

2.1 blockPart - trainPartRef

According to the wiki,
trainPartRef This refers to the id attribute of the associated trainPart
element.
(httpwiki.railml.orgindex.phptitle=TTblockPart)

 I'd like to know the relationship between JoinSplit operation and the
amount of trainPart. If there is a JoinSplit, could a blockPart have
multiple trainPart

 If somebody has a example file that has both JoinSplit operation, please
send it to me.

2.2 block - blockGroupNumber

 There's no precise description that explains blockGroupNumber on the wiki;
httpwiki.railml.orgindex.phptitle=TTblock

TT_Rostering_edit.xml as follows;

block id=d2e1628 blockGroupNumber=1
block

block id=d2e1672 blockGroupNumber=1
block

block id=d2e1711 blockGroupNumber=1
block

and

1) What does blockGroupNumber mean
2) Is blockGroupNumber mandatory attribute

Best regards,
Utah (Yutaka Manchu)
