

Dear All,

I'd like to propose following things for the certification of export/import-program of railML.

1. To disclose the exported test railML files from the candidate program, on the application-page of railML.org web site, if the program could get the certificate.

It could show how the program exports optional elements/attributes, and it's helpful to the people who want to exchange data to that system that has the export-program.

2. To check if an export/import program conforms the wiki "stories" at the certification

use railML elements/attributes;

a) Orientation/Reverse

http://wiki.railml.org/index.php?title=TT:Reversing_trains_and_formations

b) Mid night overrun

http://wiki.railml.org/index.php?title=TT:Midnight_overrun

c) How to reference Infrastructure

<http://wiki.railml.org/index.php?title=TT:howToReferenceInfrastructure>

d) Trains coupling and sharing

<http://wiki.railml.org/index.php?title=TT:trainCouplingAndSharing>

e) iRFP: Umlaufplane (rosters)

http://www.irfp.de/download/railml_beispiel_umlaut.pdf

f) railML recommendation and example for usage of DC elements

http://www.irfp.de/download/railml_beispiel_dc.pdf

stories, if the candidate program supports the corresponding optional elements/attributes?

Best regards,
Utah (Yutaka Manchu)
