Subject: PositioningSystemCoordinate(s) referenced by an EntityLocation

Posted by Felix Prüter on Tue, 09 Aug 2016 10:53:43 GMT

Hi,
is it necessary or only possible that a PositioningSystemCoordinate which is referenced by an
EntityLocation is referencrd by an InstrinsicCoordinate too?
If one does so, the intrinsicCoord value (of the referencing IntrinsicCoordinate) might be
redundant or inconsistent with the information given by the SpotLocationIntrinsic (intrinsicCoord)
or OrderedAssociatedNetElement (intrinsicCoordBegin/End) of the EntityLocation.
Is this intendet or is there a restriction in the model that I don't see?

Best regards
