Subject: railML 2.3 infrastructure extension proposal line sections
Posted by Torben Brand on Tue, 20 Dec 2016 17:26:16 GMT

Dear railML infrastructure forum,
This posting contains the discussion to an extension towards the
trackGroups
In Norway we segment a line into line sections. They consist of either stations (defined from home
to home signal) or paths (sections between stations; DE:freie Strecke).
There is a need to define which line section a track belongs to. The idea is to define a line section
as a group of tracks.
Thus I have added the new element <NO:lineSection> under <trackGroups>.
<NO:LineSection> has the attributes: @trackRef and @type.
@Type [datatype: enumeration] is preset to "station" or "path", but allows other values, too
("other:").
