Dear IS-Community,

following the rules for the Discussion pages (see

[http://wiki.railml.org/index.php?title=Dev:Wiki\\_Documentation\\_Guidelines#Discussion\\_Pages](http://wiki.railml.org/index.php?title=Dev:Wiki_Documentation_Guidelines#Discussion_Pages)  
i have to move the existing discussion about semantic of @type in  
<track> and the mapping to national usage to this forum.

In the IS Developers group the a unclear mapping for the classifications of the track in the type attribute was discussed and shall be improved in a future version:

==== German usage / Deutsche Anwendung ===

The usage in Germany is currently AFAIK:

Durchgehendes Hauptgleis; pro Betriebsstelle immer Eines bei je Eingleisiger und Zwei je zweigleisiger Strecken, mit Zugstraße Hauptgleis; alle anderen Gleise mit mindestens einer Zugstraße Nebengleis; alle anderen Gleise ohne Zugstraßen, nur Rangierfahrten Gleisverbindung; Gleise ohne eigenen Verkehrswert, in Weichenverbindungen, Überleitungen  
The mapping for mainTrack to Deutschland:durchgehendes Hauptgleis is nearby, but what's with the others:

secondaryTrack: This is a track not frequently used (e. g. for overtaking only). connectingTrack: This is a transfer track from one to another track e. g. in branches, points or cross overs.

sidingTrack: This is a siding. stationTrack: This is a track in a station, possibly with platforms.  
other:anything Any value that does not fit any value from the previous enumeration list, fulfilling the constraint: at minimum two characters, whitespace is not allowed.

Any opinions for railML® 2.x and for a refactoring in railML® 3.x?

Best regards,
