Subject: Need for clarification: <SpeedChange>@status

Dear all,

the infrastructure element <speedChange> has an attribute @status that
is unclear in its usage due to missing documentation (see [1]).

Therefore, my question(s) to you:
Do you use <speedChange>@status in your current railML interfaces?
If yes, how do you use <speedChange>@status?

Your feedback is essential for evolving version railML 3.1 and thus
highly appreciated...
