Dear Morten, dear all,

following BaneNOR's needs, I adapted the Trac ticket #414 [1] accordingly: I added a solution proposal that is very identical with the railML 3.x solution documented in Trac ticket #316 [2]. The central idea of the solution proposal is to use the element <line> also for line sections. These <line> elements can be aggregated as a complete <line> using new attribute @belongsToParent.

I am looking forward to receiving your feedback on this planned railML 2.5 implementation.
