Dear Christian,

since we have agreed in the meantime that the assumptions and examples on mileageChanges are generally right, there are some small changes still to do for RailML 2.2:

<mileageChange>.type should become optional (not applicable in all cases, not at the beginning of a track)

<mileageChange>.absPosIn should become optional (not applicable at the beginning of a track, redundant in all other cases)

Please close this issue by providing track ticket for these changes for RailML 2.2.

Thank you!
Best regards,
Dirk.
