Subject: new attribute on the vehicle element
Posted by horst.naujoks on Mon, 16 Sep 2013 15:28:54 GMT

Dear all,

I'm a developer at Qnamic AG
(http://http://www.railml.org//index.php/entwickler.html?show =35) and
we using RailML in different contexts in our products.

I'd like to submit the following extension to the railMl infrastructure
schema:

The element <vehicle> should be completed by an new optional attribute
'uicVehicleNumber'. The
whole purpose of this number is documented here:
http://en.wikipedia.org/wiki/UIC_wagon_numbers.
The new attribute supposed as an explicit supplement to the existing
id/code/name attribute facility. It
should support a better data exchange in systems which share this number.

Today, we already employ this attribute by the usage of a schema extension
(as an 'any' attribute)
and of course we'd like to replace this construct by an explicitly
specified attribute.

Kind Regards,

Horst Naujoks
