> reversed", doesn't it?

No, it does not. The fist and the carriages are still the same. The orientation of a formation currently refers to its running direction but not to a geographic direction nor a mileage direction.

So far: None. There already are these cases in practice including circulation plans w/o problems. There is no reference to an <ocpTT> in RailML so far so that's why two <ocpTT> may refer to the same <ocp> w/o problems.

Dirk.
