As some of you already know I'm writing my diploma thesis in the domain of RailML. The task is to implement a graphic editor for RailML-based rail infrastructure data.

For this purpose I also have to extend the existing XML-Schema for visualisation data.

A Zip-Archive with my current version of the schema can be downloaded from <http://www.theband.ch/matthias/railml/schema.zip> (user: railml, pwd: line).

Feel free to discuss, criticise or ask.

Greetings from Zurich  
Matthias Hengartner
