
Subject: Introduction of TAF-TSI PrimaryLocationCode as reference

Dear all,

as proposed during the railML-conference in Braunschweig, I would suggest some changes for railML to incorporate requirements from the telematics applications for passengers and freight (TAF/TAP TSI).

1. The element "tsi" in operationalControlPoints/ocp/ and the type "tOcpTsi" shall be marked as deprecated and removed in further versions of railML. These elements dedicated for the usage in conjunction with TAP TSI shall be replaced by a more generic approach as proposed in bullet point 2.

2. The file Registers.xml shall be extended by an additional entry:

```
<register code="PrimaryLocationCode">  
  <name>Primary location code for the TAF/TAP TSI, stored in the central  
reference database</name>  
  <organization xml:lang="en">CRD</organization>  
  <remarks xml:lang="en">Used for the communication between the railway  
undertaking and the infrastructure manager. format: country code as  
ISO-3366-1 + 5 digits</remarks>  
</register>
```

Maybe in the future additional items shall be added to this register:

- codes for tariff purposes (e.g. company specific coding of tariff points for NRT-fares, formerly known as TCV fares, company specific code for IRT-fares)
- reservation code

I would suggest to add them, if the outcome of the current discussion in TAF/TAP TSI about the retail reference data - used for timetabling information for the passenger, tariff data exchange and reservation messages - is mature enough to be incorporated in railML.

Kind regards,

Stefanm Jugelt

Dear Stefan,

thank you for your remarks, which I want to comment on:

I opened a ticket addressing that issue [1]. If agreed by the users, the marking can be realized with the next railML version.

I added the proposed entry in Registers.xml and gave it the code "PLC". Please have a look at the latest version of railML SVN directory trunk and give me a feedback.

Ok, I'll wait for your suggestions at the end of the current discussion.

Thank you!

The modifications described here and in ticket #252 have been
implemented with SVN revision 611.

Best regards

Dear Christian,

I agree with the change.

Best regards,

Stefan Jugelt
