Dear Joachim,

I have one small issue for RailML 2.2:

We should clarify and ease the attribute
<trainPart>.<ocpTT>.<sectionTT>.<trackRef>.dir.

So far, it has the enumeration values up, down, unknown, none, and both.
The only two which make sense are up & down but both should be renamed to
'falling' and 'raising' as in infrastructure (see also news message from
26.03.2012 and Trac ticket #145).

The others are not applicable and should be deleted. (Instead of using
'unknown' one should skip the optional attribute.)

Thank you and best regards,
Dirk.

Das Attribut <trainPart>.<ocpTT>.<sectionTT>.<trackRef>.dir ist mit den Ausprägungen up, down, unknown, none und both definiert. Die einzigen sinnvollen sind up und down, wobei diese in raising und falling umdefiniert werden sollten. Die übrigen sind nicht zutreffend (statt unknown kann das optionale Attribut weggelassen werden) und sollten daher entfallen.

If a type for "up" and "down" is needed, we should create it.

Currently the absence of the attribute has the same semantics as the attribute "dir" with value "unknown". I don't know if these two possibilities of defining the same meaning introduce any troubles in programming.

We keep in mind that there will be a renaming of the enumeration values in next major release (raising, falling).

Falls ein Typ für "up" und "down" gebraucht wird, sollte er geschaffen werden.

Zur Zeit bedeuten die Abwesenheit des Attributs und das Attribut dir="unknown" das gleiche. Ich kann nicht einschätzen, ob diese zwei Varianten, das Gleiche auszudrücken Schwierigkeiten bei der Programmierung bereiten.

Wir behalten im Hinterkopf, dass die Aufzählungswerte mit dem nächsten größeren Versionsschritt in "raising" und "falling" umbenannt werden.

Kind regards... / Beste Grüße...
Susanne

Hello Dirk,

I agree that the values are misleading and should be renamed, but the Trac ticket #145 is due to version 3.0 because renaming will be a breaking change.

I would suggest to use "tDelimitedDirection" (up, down, unknown) instead of "tLaxDirection" (up, down, unknown, both, none) in 2.2 because "both" and "none" make no sense. Instead of using "unknown", the optional attribute "dir" should be skipped.

Kind regards,

Joachim

Ich bin vollig einverstanden, aber Umbenennungen wie im Ticket #145 vorgesehen sind als Breaking Changes erst mit Version 3.0 zulässig.

Als kleine Verbesserung bietet sich an den Typ "tDelimitedDirection" (up, down, unknown) statt "tLaxDirection" (up, down, unknown, both, none) in Version 2.2 zu verwenden, da die Ausprägungen "both" und "none" hier keinen Sinn machen. Statt "unknown" zu verwenden sollte man das optionale Attribut weglassen, was in der Dokumentation vermerkt wird.

From my experience: No problem, full redundancy. From my side we should
avoid 'unknown' and leave the possibility to skip the attribute.

> We keep in mind that there will be a renaming of the enumeration values

Can we exchange "keep in mind" with "create a track ticket"? ;-)

Or expand the track ticket you already created for the same renamings in
IS ?

Thank you,
Dirk.

Ok, I will define a new type for only these two enumeration values. Something like "tStrictDirection" for "up" and "down" without any extensibility options.

Already done. [1]

> Or expand the track ticket you already created for the same renamings
> in IS ?

Joachim appended a comment for not forgetting this topic. :)

[1] <http://trac.assembla.com/railML/ticket/145>

Nice development speed. :))

Gratefully ...

Susanne
