Good day,

on Wednesdays meeting it was mentioned that a 'uniform layout' and a switch to english as the specification language will be targeted (with a transission period).

I would like to add some suggestions:

It would be nice to add the version number, publication date and covered toplevel-tag(s) to the first page of the published PDFs.

Additionally it would be nice to have a history section: Brief revision listing with tags or attributes changed. (No descriptions or arguments, just a little 'look there' for changes).

Best regards,
Joachim
