Dear railML Community

I am writing a thesis about integration of RailML into our traffic railway
information sistem so i was wondering if you could point me for the
"information about a specific train". This information should contain, train
description, time stamp, station code (don't know if there is anything in
schemas because our sistem uses station number and station name), time of
arrival and departure of the train,
driving time of train, which series is the locomotive, train weight, and
what type of train it is (freight, passenger...).

Best Regards
