Subject: valueTableType

Hello,

I would like to ask how to use the valueTableType with more than one row. As I understand the element valueLine should
can occure at least once up to undounded but at the moment it has to occure exactly once.

May we change the occurance of valueLine to 1..*?

Martin

Martin,

yes, this was clearly a mistake. It will be rectified in the new schema version.

```
<xsd:element name="valueLine" maxOccurs="unbounded">
  <xsd:annotation>
   <xsd:documentation>set of values related to a speed value (one table
line)</xsd:documentation>
   <xsd:documentation>History:
 V0.93 added
     V1.01 changed maxOccurs to "unbounded" to allow one line per speed
value</xsd:documentation>
  </xsd:annotation>
  <xsd:complexType>
   <xsd:sequence>
    <xsd:element name="values" maxOccurs="unbounded">
      <xsd:annotation>
       <xsd:documentation>the values related to a speed value
themselves</xsd:documentation>
      </xsd:annotation>
    </xsd:element>
   </xsd:sequence>
   <xsd:attribute name="speedValue" type="xsd:decimal" use="required"/>
  </xsd:complexType>
</xsd:element>
```

Regards,
Jörg von Lingen
