Hello,

with ticket #58 I found a case of wrong wording for the various weight values for <vehicle>. There was especially a mistake using "netto" for empty vehicles, which should be "tare" instead. In <formation> there was until now only one weight value and I added the new ones. For <vehicle> I have corrected the attribute names.

In order to keep compatibility with version 2.0 I have not deleted or renamed the attributes. Instead I added attributes with new name and marked those with wrong name as "deprecated", i.e. they will be deleted for version 3.0.
