Subject: scheme location to be adressed via HTTPS instead of HTTP
Posted by christian.rahmig on Mon, 11 Jun 2018 07:32:53 GMT

Dear all,

this is to inform you, that for upcoming railML version 2.4 the railML namespace and schema file location has been updated from HTTP to HTTPS.

In detail:

xmlns:rail="http://www.railml.org/schemas/2016"

has been replaced by

xmlns:rail="https://www.railml.org/schemas/2016"

and

targetNamespace="http://www.railml.org/schemas/2016"

has been replaced by

targetNamespace="https://www.railml.org/schemas/2016"

All other namespaces and URL e.g. of imported schemes have been kept unchanged.

More information are available in Trac ticket #330 [1].

Best regards
Christian

Dear Christian,

When this was changed, I assumed it was only from 2.4 and newer versions. Is the example above just poorly chosen, or have you indeed changed the namespaces for previous versions? I hope not, as this would create new namespaces separate from the ones used by all existing railML files up to and including version 2.3. There is no requirement that the namespace URI and schemaLocation should be identical. Hence, there is no reason to change http to https in the namespace.

Best,
Thomas

Dear Thomas,

you are right. My example was poorly chosen: it must be 2018 instead of 2016. So, for railML 2.4, the following changes of the namespace and schema location applied:

xmlns:rail="http://www.railml.org/schemas/2018"

has been replaced by

xmlns:rail="https://www.railml.org/schemas/2018"

and

targetNamespace="http://www.railml.org/schemas/2018"

has been replaced by

targetNamespace="https://www.railml.org/schemas/2018".

I corrected the Trac ticket #330 [1] accordingly.
