Subject: missing minOccurs="0" for <trainBrakeOperation> Posted by on Wed, 20 Jun 2018 12:42:46 GMT

View Forum Message <> Reply to Message

Dear Joerg,

when using the current railML schemes, I noticed that the new (since rev. #721) element <trainBrakeOperation> is compulsory. I presume this is possibly a mistake. In rollingstock.xsd, line 861 there is a

minOccurs="0"

missing.

May I ask you to add this or do you really intend <trainBrakeOperation> to be compulsory?

Thank you, with best regards, Dirk.

Dear Joerg and all other's,

at the last telephone conference, I was asked to check the new r2.4 <rollingstock> railML XSDs for more possible missing optionals.

So, I compared rollingstock.xsd and rollingstockTypes.xsd rev. 814 (RC 2.4) with rev. 611 (Original railML 2.3) and searched for new <xs:element> definitions without "minOccurs='0'".

The "minOccurs='0" is also missing at some new attributes but it seems to me that for attributes, it is not necessary (since older attributes also have none). (Sorry, I am not the best choice for this task since I lack some knowledge about XSDs.)

Joerg, please check this and, in case I am not mistaken, correct it for r2.4.

Please correct me in case I misunderstood or tell me what else should be done.

Best regards, Dirk.

Subject: @minOccurs, @maxOccurs and @use Posted by christian.rahmig on Tue, 02 Oct 2018 11:18:15 GMT View Forum Message <> Reply to Message

Dear Dirk, dear all,

let me answer on behalf of Jörg:

elements... are by default mandatory (minOccurs="1" and maxOccurs="1") [1]

attributes... are by default optional (use="optional") [2]

Therefore, mandatory elements and optional attributes don't have to have mentioned properties.

For the following cases, properties have to be provided in the schema:

- * optional elements occuring once: minOccurs="0"
- * optional elements occuring up to n times: minOccurs="0" and maxOccurs="n" (with n being a positive number)
- * mandatory elements occurinng up to n times: maxOccurs="n" (with n

```
being a positive number)
* mandatory attributes: use="required"

has been corrected. Thank you!

> The "minOccurs='0" is also missing at some new attributes but it seems to me that for attributes, it is not necessary (since older attributes also have none). (Sorry, I am not the best choice for this task since I lack some knowledge about XSDs.)

For attributes, please use the property use="required" or use="optional" (default).

Best regards Christian
