Dear all,

Dirk created a pretty cool wiki page about the different types of OCP (aka Operational Points) [1]. It lists the following types:

- \* station (for passengers and freight)
- \* station (for passengers only)
- \* station (for freight only)
- \* stopping point (for passengers)
- \* loop (de: Betriebsbahnhof; no passenger and freight access)
- \* siding (de: Anschlussstelle)
- \* junction (de: Abzweigstelle)
- \* crossover
- \* block signal
- \* block post

.... and some combinations.

Thank you, Dirk!

My question to the community: do you miss any category? Do you know any national-specific types from your country?

The intention is to use this list as basis for definition of OP types in railML 3.1.
