Dear all,  
may you please address me to some documentation about the meaning of the tProcessStatus enumeration fields?  
The wiki page states they are missing.

planned  
actual  
calculated  
toBeChecked  
changed  
imported

Thanks a lot,

BR

Fabrizio

Dear Fabrizio,

unfortunately there is no agreed means to use this attribute and its values. As far as I know in the railML example files only 'planned' is used.  
I would like to suggest that you describe your intended use case for using this attribute in order to receive some feedback from the timetable community.

Best regards,

Philip Wobst
