Subject: [railML3.1] Difference between Stopping Places and Operational Point (opOperationType stoppingPoint)
Posted by Fabrizio Cosso on Mon, 07 Jan 2019 14:52:15 GMT

Dear all,
is it possible to get a short description of the semantic difference between a StoppingPlace Entity and a OperationalPoint Entity with opOperationType==StoppingPoint?
Is it a realistic scenario several operationalPoints of type StoppingPoint belonging to a operationalPoint of type Station?

Thanks a lot for your clarifications,

BR

Fabrizio
