

Excellently organised?
Good in IT?
Railway basics?

Fluent English?
Hands-on mentality?
Some free time?

railML.org

railML.org is an international initiative focusing on the standardisation of data exchange and prototyping applicative software for the railway industry. We coordinate the work of numerous European railways, organisations and software manufacturers.

We are seeking for students or young professionals who want to contribute to our activities by applying their freshly acquired university skills in practice and gain professional experience.

The tasks basically consist in organising conferences and meetings, preparing communication with partners and coordinators, writing of minutes and preparation of presentations. Furthermore, PR related work like updating the website and writing news articles is part of the job. Should you have knowledge, experience or interest in the area of IT development work, we are happy to find support in UML modelling and railML schema development.

There are no fixed office hours, working from home is possible. The railML office is located in Plauen. Practical training/internships with our partners in Europe could be arranged.

Salary starts at 15 € per hour on a freelance basis. Students with long term declaration of intentions are preferred. Apply by e-mail to **student.jobs@railml.org** with full CV.

Candidates should have:

- Good command of English and German (written and oral); further languages are a plus
- Sense and taste for organization and human relations
- Good understanding of usual office programmes; basic knowledge of railways and information technology are a plus
- Sufficient availability, considering that the offered job requires working times of 15-30 hours per month

P.S. Auch wenn das Englisch nicht ganz so perfekt ist: Eine überzeugende Bewerbung kann nicht schaden ... ;-)
