

## Annex B: Certification Application

The following information is required to initiate certification process for one or more interfaces of a software product:

Name of application/software solution:

If only a specific software component of a larger solution is being certified, as described in [Bundling and Re-distribution](#), the submission should state the component name, as well as the name of the released product, if it is known at the time of certification.

Applicant's legal name:

Applicant's legal name (company or individual developer) If the interface is developed for a third party, it is recommended to include a note *Developed for [vendor]* or *Developed as part of [project name]*

Exact railML version:

Export certification only   
  Import certification only   
  Export and Import certification

Was the data sample validated with [railVIVID](#) or other tool prior to submission?

I hereby confirm that I have familiarized myself with the contents of this guide and I agree to the terms and conditions of railML certification.

(Optional) I hereby grant to railML.org the right to use the provided data samples as public examples of the railML standard. The data may be anonymized prior to public release.
