Hello,

we diskussed in Bern to use "tElementWithIDAndName" in all sub schemas for elements to be referenced (elementRefId --> element.id).

I startet to do so in the timetable, here my experiences:

- tElementWithIDAndName should be part of GenericRailML.xsd
- the "name" attribute should be optional because not every element needs to have a name.
- a "description" attribute is often used in the timetable schema instead of the "name" and should be added (optional) as well, because it is something slightly different from a "name" (e.g. an operating period with id="15", name="Mo-Fr" and description="driving Monday to Friday on working days")

Best regards,
Joachim Rubröder
