[English version (sorry that the first was in German, I came over the German webpage and haven't made the switch. ;-)]

Dear railML Community

I have contacted Dani Hürlimann to apply for a railML partnership. He asked me to introduce myself briefly in this newsgroup, an opportunity I happily avail myself of with this post.

Some of you might know me already. During the last 3.5 years, I was the head of development at SMA and as such participated in a couple of railML meetings. During that period, I had to do with railML through different activities:

- implementation of ZLR for SBB
- railML interface of Viriato
- collaboration with Joachim Rubröder (timetable coordinator)

At the beginning of this year, I founded my own company trafIT solutions gmbh, which offers services in the for traffic informatics. One area of expertise are interfaces, especially the use of railML to exchange railways data. In order to be able to continue to cover this area professionally, I apply herewith for a railML partnership.

I will attend the next meeting and am looking forward to meet old and new acquaintances.

Best wishes,
Bernhard Seybold
