We currently use the following roles on the trainPart level:

- contractor (Auftraggeber)
- subcontractor (Fremdunternehmer)
- concessionaire (Konzessionsinhaber)
- operator (Betreiber)

All of these come with attributes like address, phone number, licence number, etc.

That's why, and because the possible roles vary for different users, I would prefer to model these as separate and referable entities. This wouldn't be a breaking change, so why not do it for the next minor release?

Best, --Andreas.
