Thanks for summarizing the already long thread. :-)

One question, that came to my mind regarding this list is:

Do we really need an "infrastructureManager", a "vehicleManufacturer" and a "vehicleOperator" binding in a "trainPart" as just implemented [1] and partly proposed by myself [2]?

I mean - no.

\* The "infrastructureManager" binding should be defined in the Infrastructure sub-schema for each "track" and/or "line".

It anyway may differ for one "trainPart".

\* The "vehicleManufacturer" and "vehicleOperator" binding should be defined in the Rollingstock sub-schema for each "vehicle".

It anyway may differ for one "trainPart".

That would leave the following contract bindings for the "trainPart":

- \* customer
- \* railwayUndertaking
- \* operationalUndertaking
- \* concessionaire
- \* contractor (general usage)
- \* any (extensions)

Any comments appreciated.
