Hi Andreas.

Thanks for the quick reply.

It is the last issue, that is planned to be implemented for the "railML 2.2 Release Candidate 1".

Andreas Tanner <ata@ivu.de> writes:

I see, we talk about different "vehicle operators". I try to clarify my point of view. Please, correct me, if I mix other contract bindings here.

- \* The "vehicle operator" in the Rollingstock sub-schema should be the company that is the "owner" of the vehicle.
- \* The "vehicle operator" in the Timetable sub-schema may be the company that provides the transport service with the vehicle.

Such a use case with different wagons and locos did happen at the beginning of this timetable period in December 2012:

RE4 of the ODEG: [1]

The wagons and loco of this "fixed formation" had different "vehicle owners", but are operated by one "vehicle operator" for this service.
