Hello Susanne!

At first the good news: we're already working on a solution!

Currently, a new server is configured with which we combine the outsourced services (SVN / Issue Tracker / NNTP). With the new installation, we will also try to use the ticket system Redmine [1], which brings a few new features and improvements over the previously used Trac / SVN.

I will report here in the forum about news and the status of the installation soon. We plan to switch the server on within the last week of January 2014!

Best regards,
Alexander Wolf
