Hallo,

as briefly described during meeting in Brunswick the latest version of rollingstock scheme is 0.93
with the major addition of train related data in <formation> branch. However, it is still possible
to discuss the best "mounting point" of this branch:
1. railml --- rollingstock --- rs   <= vehicle related
         |
         -- formations --- formation <= train related
  or
2. railml --- rollingstock --- rs   <= vehicle related
                  |
                  -- formation <= train related

Please give me your opinions.

Best,
Joerg von Lingen
