Subject: Modelling transition bends

Posted by Christian Rahmig on Mon, 01 Sep 2014 09:46:40 GMT

Dear railML users,

with the ticket #251 (cf. [1]) we re-opened the topic of modelling
transition bends, which was already "discussed" here in the forum some
years ago (cp. [2]).

Within railML 3 we want to define a solid solution for this problem
since transition bends cannot be modelled with the existing
infrastructure schema 2.2.

Therefore: If you have any comments on the usage of transitions bends in
your applications and data models, feel free to post them here in order
not to forget about them and add them to the ticket.
