Dear All,

Would you mind answering the following questions for me?

1. Category
 Regarding to the wiki, "category" means

terms are defined quite differently.'
(http://wiki.railml.org/index.php?title=TT:category).

But in "TT_S-Bahn_ZH.xml", the "category" instance has only following
data;

<categories>
    <category id="d2e125" />
</categories>

2. Rosterings

2.1 blockPart - trainPartRef

According to the wiki,
"trainPartRef: This refers to the id attribute of the associated
<trainPart> element. "
(http://wiki.railml.org/index.php?title=TT:blockPart)

 I'd like to know the relationship between Join/Split operation and the
amount of "trainPart". If there is a Join/Split, could a blockPart have
multiple "trainPart"?

 If somebody has a example file that has both Join/Split operation, please
send it to me.

2.2 block - blockGroupNumber

 There's no precise description that explains "blockGroupNumber" on the
wiki;
http://wiki.railml.org/index.php?title=TT:block

"TT_Rostering_edit.xml" as follows;

```xml
<block id="d2e1628" blockGroupNumber="1">
</block>

<block id="d2e1672" blockGroupNumber="1">
</block>

<block id="d2e1711" blockGroupNumber="1">
</block>
```

and

1) What does blockGroupNumber mean?
2) Is "blockGroupNumber" mandatory attribute?

Best regards,
Utah (Yutaka Manchu)
