Subject: stopTimes - no reference to the times element
Posted by Philip Wobst on Fri, 03 Jul 2015 06:57:01 GMT

Hello all,

I would like to get some feedback regarding the documentation of the
<stopTimes> element (http://wiki.railml.org/index.php?title=TT:stopTimes).

Existing Semantics:
The stop time as difference between arrival and departure should be:
minimalTime + operationalReserve + additionalReserve

I would like to add the following 'Open Issue'

The description in the semantics sections gives some rules that refer to
the arrival and departure of <times>. However, multiple <times> with
different scope can be provided for one <ocpTT>. In such a case it hast
to be made clear which one was used for the <stopTimes> element - i.e.
which <times> element the rules apply to.

Feedback would be appreciated.
