We use track@mainDir in Norway in railML2.3nor for our use case SCTP and capacity planning.

<track @mainDir>

We use mainDir for three things:

1. to indicate on a macroscopic level if the line is single (mainDir="none") or double track (mainDir="up" or "down")
2. to indicate the usual driving direction of the double track
3. to indicate the position of the track in a mesoscopic level (mainDir="up" track on the right side in increasing mileage)

We ask to reverse the deprecation or give us an alternative suggestion towards our mapping needs.
