Dear Joerg,

when using the current railML schemes, I noticed that the new (since rev. #721) element <trainBrakeOperation> is compulsory. I presume this is possibly a mistake. In rollingstock.xsd, line 861 there is a  
    minOccurs="0"  
missing.

May I ask you to add this or do you really intend <trainBrakeOperation> to be compulsory?

Thank you,  
with best regards,  
Dirk.
