
Subject: Harmonize rolenames for association between *Location and
*AssociatedNetElement

Dear RTM-Community,
by studying the "new" RTMv1.1 UML Location package I recognized a mismatch in rolenames.
The rolename of OrderedAssociatedNetElement(s) for a LinearLocation is associatedElements
The rolenname of AssociatedNetElement(s) for an AreaLocation is associatedNetElements

Do you agree that this should be harmonizes for "code styling reasons"?

Kind regards
