Hello Dirk,

I agree with your assumptions. Earliest and latest are data from the order process.

The times should still be kept in one place <times>, even if they are not expected or present at all ocpTT in some use cases. Therefore earliest and latest should not be declared as deprecated.

As a consequence, however, only an example of the use of earliest and latest in the wiki needs to be added. I do not believe that anything needs to be legalized.

Best Regards
Heribert
