Subject: Moving of "infrastructureVisualizations"
Posted by Susanne Wunsch railML on Thu, 20 Mar 2008 10:50:07 GMT

Hello,

in the course of merging all sub schemas into one railml-tree and with respect to some partial downward compatibility the element "infrastructureVisualizations" occurs in the same level like "infrastructure", "rollingstock" and "timetable".

```
railml
   +-infrastructure
   +-infrastructureVisualizations
   +-rollingstock
   +-timetable
```

I would prefer, moving it into element "infrastructure" for a bit more clear structure.

By the way, its components are defined in files "infrastructure.xsd" and "infrastructureTypes.xsd", so it's organized by "infrastructure".

New structure would look like:

```
railml
   +-infrastructure
   +-rollingstock
   +-timetable

infrastructure
   +-operationControlPoints
   +-lines
   +-visualizations
```

Best regards,
Susanne
