Dear Joerg and all other's,

at the last telephone conference, I was asked to check the new r2.4 <rollingstock> railML XSDs for more possible missing optionals.

So, I compared rollingstock.xsd and rollingstockTypes.xsd rev. 814 (RC 2.4) with rev. 611 (Original railML 2.3) and searched for new <xs:element> definitions without "minOccurs='0'".

The "minOccurs='0'" is also missing at some new attributes but it seems to me that for attributes, it is not necessary (since older attributes also have none). (Sorry, I am not the best choice for this task since I lack some knowledge about XSDs.)

Joerg, please check this and, in case I am not mistaken, correct it for r2.4.

Please correct me in case I misunderstood or tell me what else should be done.

Best regards, Dirk.
