Hello,

I'm Martin Griesemer from INIT in Germany.

I have some questions about Infrastructure Visualization (see Wiki IS:infrastructureVisualizations). Does the detailed description exist ? Is it still up to date ?

What can be referenced under trackElementVis? All subelements of trackElements listed on that wiki page (IS:trackElements) ?

What I could not found is how to map positions of different sections of track. It would be nice to be able to do it as detailed as with the geomapping (be able to put x,y positions for several kilometer point of the track).

Thanks in advance,

---
