Subject: Overlapping or gapping track section borders Posted by Joerg von Lingen on Sat, 17 Nov 2018 04:48:08 GMT View Forum Message <> Reply to Message

Hi,

at the moment the TVDsection has references to the demarcatingTrainDetectors, which might be even virtual insulated rail joints. It that situation the issue of Overlapping or gapping track section borders may occur.

- 1) Will the interlocking software be able to recognise the neighbouring train detector in order to see the occupation sequence?
- 2) Would it be necessary to specify an individual timer to logically keep the occupation in section one until section two is really occupied?

Best regards, Joerg v. Lingen
