Subject: Restricted Areas: limitedBy vs. elements inside Posted by Joerg von Lingen on Sun, 13 Jan 2019 03:37:50 GMT View Forum Message <> Reply to Message

Dear all,

currently a restricted area can be defined by the references to limiting objects (isLimitedBy) and the references to all track assets inside the area (trackAssetInRA).

This can be seen as a redundancy which is not really needed. So how would you define such an area?
