Dear all,

in the IL schema we have currently the possibility to mark a switch as type "interlacedSwitch" with relation to another switch because they both might have a dependency for interlocking operation. This particular type is currently not foreseen in IS at all. Do we need this type?

attached a photo of such interlaced switches (  
[https://de.wikipedia.org/wiki/Datei:Plektita\\_trakforko\\_14.jp](https://de.wikipedia.org/wiki/Datei:Plektita_trakforko_14.jp) eg)
