Dear Jörg,
dear all,

I believe that the inclusion of UUIDs as possible IDs and references and the general application of the designator concept are important improvements in railML 3.1 over railML 2.x. Furthermore I believe we should establish a best practice on when and how to use which method. I will add some more thoughts on that after Easter. I encourage the community to post your views on Jörg's question.

Best regards,
Thomas Nygreen - Common coordinator
