Dear Joerg,  
thanks for the quick answer.  
I get your point, but I have another question then: what kind of "trainDetectionElement" could a line border be?

From the 3.1 railML documentation the possible values are:

```
<xs:enumeration value="axleCounter"/>
<xs:enumeration value="axleCountingCircuit"/>
<xs:enumeration value="clearancePoint"/>
<xs:enumeration value="insulatedRailJoint"/>
<xs:enumeration value="trackCircuit"/>
<xs:enumeration value="virtualClearancePoint"/>
```

Any suggestion?

Thanks again in advance,

f.
