Dear all,

the railML use case working group "ETCS" that works on the "ETCS Track Net" use case (see [1]) suggests to extend the current implementation of <restrictionArea> in railML 3.x in order to fulfill requirements resulting from ETCS specification (track condition areas).

I summarized the proposed changes in Trac ticket #365 (see [2]).

Please have a look at the proposed changes and let us know your short or long comments.
